

Summary

Erick Jesús Ríos González is a physicist (B.Sc. in Physics, Universidad Autónoma Metropolitana) and soon-to-be graduate in Mathematics (B.Sc., Universidad Nacional Autónoma de México). With a strong background in physics, parallel computing, and mathematical modeling. He has developed expertise in Python and CUDA programming, particularly in the implementation of algorithms for high-performance computing, including parallel kernel design and optimization. His work spans both theoretical and computational aspects of quantum mechanics, quantum information theory, and numerical methods, including quantum Monte Carlo simulations techniques.

Erick has contributed to research in the areas of quantum computation and high-performance computing, and he has been involved in teaching undergraduates in CUDA-based parallel programming. He has presented at national and international conferences. He is preparing several manuscripts for peer-reviewed journals. Erick is dedicated to advancing the field of quantum computing and is eager to contribute to cutting-edge research at the University of Copenhagen.

Education

Universidad Autónoma Metropolitana

CDMX, Mexico

B.Sc. Physics

GPA 3.72/4.00

Oct 2023

Final Project: "Study of the Phase Transition in a 2D Ising Model Using Topological Variables"

Advisor(s): Dr. Angel Alejandro García Chung, Dr. Marco Antonio Maceda Santamaría.

Universidad Nacional Autónoma de México

CDMX, Mexico

B.Sc. Mathematics

GPA 3.80/4.00

Dec 2024

Thesis: "Analysis of Correlation between Physical, Topological and Geometric Variables Present in the Phase Transition of a 2D Ising Model with Zero External Magnetic Field"

Advisor(s): Dr. Angel Alejandro García Chung

Employment

Faculty of Sciences, UNAM

CDMX, Mexico

Teaching Assistant

Aug 2024 – Present

- Created engaging educational materials and interactive lesson plans to foster student learning and enhance comprehension.
- Guided students in mastering High Performance Computing techniques, empowering them to develop robust algorithms and innovative solutions.
- Designed and optimized CUDA scripts for various optimization problems, significantly improving algorithm assessment efficiency and enhancing students' practical coding skills through collaborative projects.

Didi Chuxing Technology Co.

CDMX, Mexico

Data Science Intern

Jun 2023 – Oct 2023

- Developed advanced Python algorithms to develop robust data models for Dark Kitchen DiDi in LATAM; facilitated strategic decisions that boosted operational efficiency by 30% and reduced data processing time by 50%
- Built **Power BI** dashboards, focusing on data quality to highlight key performance metrics and actionable insights.
- Enhanced data accuracy by 25% through rigorous data cleaning and validation processes.
- Collaborated with cross-functional teams to integrate data sources and optimize reporting workflows.

Research Experience

Universidad Autónoma Metropolitana

CDMX, Mexico

Assistant Researcher

May 2021 – Oct 2023

- Designed of object-oriented code to create a database for the 2D Ising Model.
- Implemented parallel computing techniques, achieving a 33% increase in code efficiency.
- Leveraged high-performance computing patterns using Max Planck Institute resources, enhancing computational efficiency by 40% and accelerating mathematical simulations by 25%, leading to groundbreaking research advancements in theoretical mathematics.

- Executed complex data analysis leveraging PySpark and Matplotlib, uncovering insights that improved data processing efficiency by 30%.
- Created Convolutional Neural Network (CNN) for predictions, achieving an accuracy of 93%.

Instituto Nacional de Óptica y Electrónica
Assistant Researcher

Puebla, Mexico
 Jun 2022 – Jul 2022

- Developed parallel computing scripts using *Python* to optimize simulations.
- Visualized data from simulations of HII region expansion, providing insights into astrophysical processes.
- Presented research results and data analysis to an audience of researchers and experts.

International Schools

International Centre for Theoretical Physics
(South America Institute for Fundamental Research)

São Paulo, Brazil

Assistant

Oct 2024

- Quantum algorithms (Grover, Shor, VQE, QAOA), quantum simulations using Qiskit, quantum information processing, quantum noise models, quantum machine learning applications.
- Development of a quantum algorithm simulator using *Qiskit*, implementation of matrix decomposition in a quantum simulator, analysis of quantum optimization algorithms in noisy environments.
- Advanced proficiency with the *Qiskit* framework, implementation of quantum gates, optimization of quantum algorithms, problem-solving in quantum computing applied to optimization and machine learning.

Abdus Salam International Centre for Theoretical Physics

Trieste, Italy

Assistant

May 2024

- Implemented advanced topics in Mathematics for machine learning, improving training efficiency on complex data by 40%.
- Analyzed large amounts of data using Topological Data Analysis techniques.
- Engineered advanced high-dimensional statistical Python code to assess machine learning algorithms, reducing computational time by 40% and increasing algorithm evaluation accuracy by 25% in a team of 4 data scientists.

Congress Participations

- XIII Mexican School on Gravitation and Mathematical Physics Nov – 2021
Participated in workshops and lectures on advanced topics in gravitation and mathematical physics.
- LXV Congreso Nacional de Física Oct – 2022
Presented a poster on the study of the phase transition in a 2D Ising Model using topological variables. Solid-state physics, network theory and topology.
- Artificial Intelligence Macrotraining Workshop Nov – 2022
Attended intensivetraining sessions on artificial intelligence and large-scale machine learning techniques.
- Second School of Quantum Computing, Institute of Nuclear Sciences. Jul – 2023/ Aug – 2023
Completed a series of lectures and hands-on sessions on quantum algorithms and programming using Qiskit at Institute of Nuclear Sciences of National Autonomous University of Mexico.
- Polariton School Quantum Fluids of Light Summer School
Participated in lectures on polaritons and quantum fluids of light, including experimental and theoretical approaches.

Projects

ISINGenerator

Github

Open-source library facilitating advanced analysis of energy, magnetization, and topological domains in a 2D Ising Model; enhanced simulation accuracy by 50% and received 2+ GitHub stars within 3 months

Skills

Technical: C/C++, Java, Python, FORTRAN90, SQL, Scala, MATLAB, R, SAS, Power BI

Language: Spanish(Native), English(C1), Japanese(A5)

Laboratory: High Performance Computing (HPC) tools, Convolutional Neural Networks (CNN), Parallel computing techniques, Artificial Intelligence development.

Softskills: Teamwork, Problem-solving, Communication, Leadership, Time Management.

Teaching

Seminary on Computer Science A

CDMX, Mexico

Teaching Assistant

Universidad Nacional Autónoma de México

Introduction to Parallel Computing with MPI, OpenMP and CUDA

Aug 2024 – Dec 2024

Articles (In Preparation)
